Landscape lighting helps create aesthetic appeal for the exterior of your building. Spotlighting your building and the trees surrounding your facility helps the property feel safer and more pleasant for guests. These bulbs typically are problematic to replace and operate at high temperatures, and the light is often wasted in the fixture. LumiLast GreenScape Exterior spots give you years of amazing exterior lighting at a fraction of the energy consumption. Keep your exterior lighting looking beautiful and help the environment with GreenScape LED lighting.

LimeLumi and our installers make sure to recycle all the wasteful fixtures we remove.
